Save the date

Under the High Patronage of Mr Emmanuel MACRON
President of the French Republic

4th World Congress on Agroforestry
‘Make our planet treed again!’

20 to 22 May 2019, Le Corum Conference Centre, Montpellier, France

“We are on course for disaster unless we act now.”
Greta Thunberg, Climate Youth Activist

We need clean up farming. And get all that excess carbon out of the air. What is the fastest, cheapest way of doing that? Probably agroforestry, or trees on farms.

Agroforestry raises crop and livestock yields, buffers valuable landscapes against the ravages of climate change, nourishes the soil and offers a cornucopia of much needed consumer and industrial products from honey to timber. Perhaps best of all, agroforestry intensifies a tree’s ability to greedily suck up carbon dioxide and store it safely deep in the soil.

Agroforestry. It may be the future of farming. And perhaps of the planet.

Join more than 1,200 agroforesters, researchers, decision-makers, business leaders, students, NGOs and farmers from more than 100 countries for the biggest agroforestry gathering our planet has ever seen.

Events throughout the city will bring agroforestry vividly to life. Field trips to surrounding agroforestry farms, tastings of agroforestry products, a gala dinner and many side events will fill a busy week.

The World Congress on Agroforestry is organized by CIRAD and INRA in partnership with World Agroforestry, Agropolis International and Montpellier University of Excellence.
